

FoodRescue AI

Don't Waste Food. Rescue It.

Real-time surplus-to-shelter coordination

The coordination gap

Food exists. Time doesn't.

The challenge is connecting surplus food to the right shelter and driver before expiry.

NO REAL-TIME LINK

“There is no simple real-time system connecting surplus food with the right shelter and driver — before the food expires.”

SURPLUS SIDE

- Edible food is wasted
- Limited expiry time
- Shelter fit is unclear

NEED SIDE

- Shelters need food
- Drivers are hard to coordinate
- Impact is hard to measure

“The problem isn't always a lack of food — it's the lack of connection before time runs out.”

The coordination gap

One connected rescue workflow

FoodRescue AI connects donors, shelters and volunteer drivers in one real-time platform.

POST → EXTRACT → MATCH → ASSIGN → VERIFY → MEASURE

“From surplus to shelter, every minute matters.”

One connected rescue workflow

Every rescue is traceable

A GPS-verified lifecycle gives the team real-time status from match to delivery.

500 m GEOFENCE

Pickup + delivery are verified against the expected location.

“Trust the handover. Verify the impact.”

GPS-verified rescue lifecycle

AI turns text into a matching decision

EXAMPLE INPUT

“15 kg cooked rice and vegetables available for the next 2 hours.”

AI OUTPUT

Food	Cooked rice & vegetables
Quantity	15 kg
Category	Cooked meal
Urgency	High 🚨

SMART MATCH SCORE

$\text{Distance} \times 35\% + \text{Capacity} \times 25\% + \text{Compatibility} \times 20\% + \text{Urgency} \times 15\% + \text{Driver} \times 5\%$

“AI doesn’t just find a match. It helps make the right rescue happen on time.”

Intelligent matching

Built for fast, verified rescue

01

Food Donation

Quantity + expiry

02

AI Extraction

Food type + category

03

Smart Matching

Weighted shelter ranking

04

Expiry Tracking

Prioritize urgent food

05

Driver Coordination

Assign available drivers

06

GPS Verification

500 m geofence

07

Map Integration

Leaflet + OpenStreetMap

08

Impact Dashboard

Food + meals + CO₂e

“Fast. Verified. Measurable.”

Three principles behind every rescue

From user action to impact analytics

USERS	Donor • Shelter • Driver • Admin
FRONTEND	React + Vite • Tailwind CSS • React Router • Framer Motion
API	REST API • JWT Authentication
BACKEND	Node.js + Express • Rescue orchestration
INTELLIGENCE	LLM API + Mock Fallback • Weighted Matching
VERIFICATION	GPS 500 m geofence

“Technology becomes meaningful when it moves food, not just data.”

System architecture

The impact dashboard — directly from our working product

Scale the rescue network

01 Dedicated mobile app

02 Real-time driver tracking

03 Advanced route optimization

04 Real-time notifications

05 Improved AI matching

06 Predictive food demand

07 Multi-city expansion

08 NGO & government partnerships

CLOSING THOUGHT

“A world where surplus food reaches people instead of landfills.”

Future vision
